Top 10% Female Economists, as of October 2010

This page shows one of the many rankings computed with RePEc data. They are based on data about authors who have registered with the [RePEc Author Service](#), institutions listed on [EDIRC](#), bibliographic data collected by [RePEc](#), citation analysis performed by [CitEc](#) and popularity data compiled by [LogEc](#). To find more rankings, historical data and detailed methodology, click [here](#). Or see the [ranking FAQ](#). These rankings take only into account authors registered with the [RePEc Author Service](#). As authors do not report whether they are male or female during registration, female authors are determined with pattern matching on first names along with a list of exceptions. Please report any classification errors to [Christian Zimmermann](#). 4278 female authors have thus been found, about 16.4% of all authors.

The data presented here is experimental. It is based on a limited sample of the research output in Economics and Finance. Only material catalogued in [RePEc](#) is considered. For any citation based criterion, only works that could be parsed by the [CitEc project](#) are considered. For any ranking of people, only those registered with the [RePEc Author Service](#) can be taken into account. And for rankings of institutions, only those listed in [EDIRC](#) and claimed as affiliation by the respective, registered authors can be measured. Thus, this list is by no means based on a complete sample. You can help making this more comprehensive by encouraging more publications to be listed ([instructions](#)) and more authors to register ([form](#)). For more details on the various rankings that are available as well for documentation, follow this [link](#).
